9-- Imposing Citizen BAVAD Voting to Keep Citizenship, and their Easy Annual Government Survival Confidence Referendum on the Internet.

To achieve a reinforced form of **Communism**, the FastCABAL uses all sorts of other names, like **Socialism**, **Progressivism**, **Technocracy**, **Wokeism**, and **Leftism**, let alone… **Democracy**. In fact, the worst pseudonyms for **Communism** that it has so far invented to hide its foul play have been **Fabian Socialism** and **Cultural Marxism**. However, as **Ayn Rand** well said: *"There is no difference between communism and socialism, except in the means of achieving the same ultimate end: communism proposes to enslave men by force, socialism by vote. It is merely the difference between murder and suicide"*. From this point of view of **enslaving people by vote**, the best name the communists have deceitfully misused so far in recent history to hide their global enslavement plan for the rest of us is the word… *"**Democracy**"*, or rather what we supposedly have now as a democracy. This fake democracy is only at best an ugly oligarchic DebtOcracy, and at worst a TerroristOcracy. But no "enslavement by vote" can exist in DatakAristarchy.

The voting situation shown below is impossible in DatakAristarchy

In DatakAristarchy, voting people are no more ignorant or impotent weightless citizens because of previous reforms: **Reform 1** (All-Truth), **Reform 2** (All-Knowledge), **Reform 3** (only open lobbying), **Reform 4** (no *BigMoney* financing politics), **Reform 5** (public money full transparency), **Reform 6** (full speech liberty) and **Reform 7** (no network of media not competing for only ***All-Truth*** or spreading *BigMoney* fake news).

In DatakAristarchy, when there is an election, there is no more any type of electoral program with all sorts of empty promises. There is only an electoral contract that is fully binding in 4 ways on the part of the governor who won the election on the basis of his contract: 1) it must be all done; 2) it must be done within the specified time; 3) it must be done all with only the financing indicated; 4) it must be done only with the public or private collaborators indicated in the Annex.

On the basis of such binding contract, all citizens must vote with decision power, voting to maintain citizenship, and vote for only 3 executive persons (the **GDS** of the TetractArium) chosen for executing their winning electoral contract. Non-citizens residents must also vote, but for only vital information to management. If no contract wins a majority at the first electoral date, a second voting tour takes place after 2 weeks, but with only the 2 mainly voted contracts, which will ensure one contract necessarily wins at full majority at that second electoral date.

All citizens have two national IDs: a normal FEPNID (Fully Explicit Picture National Identity Document) and a BAVID (Biometric Anonymous Voter Individuality Document). The latter is a special biometric but nevertheless anonymous card for voting only. The issuance of the BAVID is done in such a way that, after the BAVID is issued, no machine can tell to whom it belongs, not even the machine that issued it. The brand-new pre-voting machines that will be used to be allowed to the actual voting process will only certify two things to the attending voting official:

1. that the anonymous person coming for voting with the presented BAVID has on his own body the bio feature that corresponds to the BAVID card and, consequently, that he is an anonymous citizen, or only an official resident, allowed to vote in this election;
2. that the holder of the BAVID card has not yet voted in this election.

After being allowed to vote on the basis of this BAVID biometric anonymous check, the voter then goes to the voting attendant and gets, after having voted, a separate receipt with his regular ID confirming he, with all his regular FEPNID particulars indicated on the receipt, has voted. This FEPNID voting receipt is important as voting is obligatory for citizenship or information. All must vote for a chosen contract (from a choice of up to 10 contracts). Citizens who do not vote for 3 times in a row, without proper justification, will lose some social benefits, and possibly even their citizenship, and consequently in this latter case, their regular passport.

Interestingly enough, the winning electoral contract must always contain the summary and objectives of all the new laws the governor intends to implement, if any, including clear details of their main new rules and financing source from the overall budget. If new laws are contemplated, the BEC (Binding Electoral Contract) must always contain a ClawPro Annex outlining their nature. Otherwise, they cannot be implemented after the election. There can be no more any kind of surprise during a mandate, after an election, during all of a mandate, in terms of new laws and/or new forms of financing public governance through any kind of not pre-announced form of taxation in the ClawPro Annex.

In DatakAristarchy, there is no more any plain Electoral Program promoted by a traditional political party. Political parties can offer only a binding Electoral Contract with a limited amount of maximum 10 specific items. This contract is called a BEC (Binding Electoral Contract) and its annex outlines all intended new legislation and/or new taxation, if any, in a ClawPro Annex.

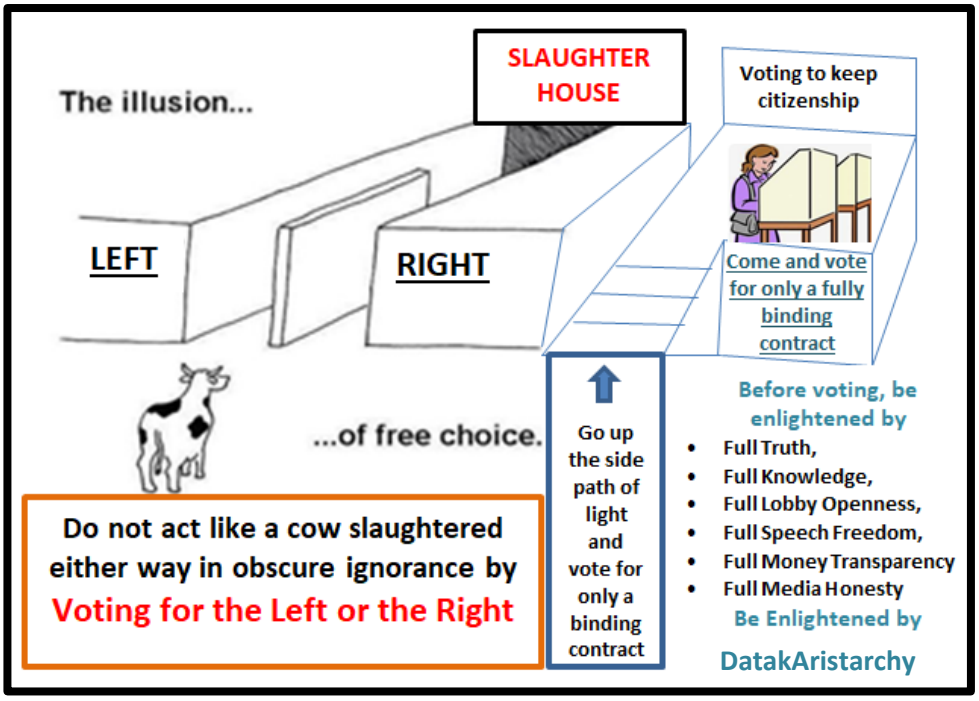

Again, that electoral contract is fully binding in 4 ways: 1) all of its up to 10 items must be done; 2) all of it must be done as per Reform 5, with only the indicated resources spent in a fully transparent budget open to all citizens online, as fully FTAT (Full Truth And Transparency) compliant; 3) all of it must be done within the specified times; 4) all of it must be done with the specified team of collaborators and ministers, or their possible substitutes also indicated in the BEC Annex of the elected Governor, and possibly the specified private contractors. Having such a new type of fully binding electoral contract, instead of a senseless, and always un-respected electoral program, means full executive efficiency at minimal costs in a perfect way of FTAT (Full Truth And Transparency) compliance. Because that contract has been voted obligatorily in full majority by all citizens, it becomes during the coming mandate a kind of priority addendum to a

kind of new flexible constitution. As such, no court, not even a constitutional court, can prevent its full execution, and not even a parliament that, according to Reform 10, does not exist in DatakAristarchy, being replaced with a new TetractArium of governance.

No Citizenship Without Voting and no Government without Annual Confidence Referendum.

Only citizens can vote to decide an election. Legal residents are also required to vote, but cannot decide an election. But, for both categories, voting becomes a serious business by becoming a legal duty, no more just a right. DatakAristarchy gives citizenship only to a child of a citizen genitor, or to an immigrant legally selected abroad (s. Reform 13) after he has lived legally in the country for 5 consecutive years after his official admission without committing a single crime.

In DatakAristarchy, citizens are also imposed to vote easily on the Internet, on a BAVAD basis, an annual referendum of confidence to their government. If that referendum is not won at 51% by citizens, the government must immediately resign and be submitted to a brand-new election.

In DatakAristarchy, for a citizen in particular, not voting without a serious specific justification is a crime. After 3 instances of such crime without justification, the citizen loses his citizenship, or the legal resident loses its full legal residence. The person becomes stateless and can reacquire citizenship or residence only through a formal commitment to vote again, and the payment of a very stiff fee for this process. The non-voter also loses many related taxation privileges or social benefits that apply to citizens or residents. Stateless persons can get a national Stateless ID or travel document that may be accepted or not accepted by other countries, and they have their acquired national public pensions reduced to the minimum level. Not voting is serious business.

As better explained further down in details, be it clear that the duty of voting in DatakAristarchy is based on a perfect new BAVAD system that was invented for voting to be made most easy, and in particular to be bio-anonymous while avoiding any possible kind of fraud. Each step of the new BAVAD voting process is conducted with absolute DATAK compliance, as part of the Absolute DATAK (Decentralized All-Truth-All-Knowledge) Reformation of DatakAristarchy.

If our current advanced modern technology has allowed us to go to the moon and to mars, it can certainly allow us something much easier: allow DatakAristarchy to have a perfect voting system without any possible fraud, based, as we will see, on new biometric anonymous technology called BAVAD (Biometric Anonymous Voting Admission Database). Perfect Fraud-Less Biometric Anonymous Voting is definitely possible and firmly established in DatakAristarchy.

Democracy	vs.	**DatakAristarchy**
Means		**Means**
Hope for the fulfilment of an uncertain electoral **program**	vs.	Certainty for the execution of a fully-binding electoral **contract**
by hundreds of uselessly babbling and corrupted unaccountable politicians, and	vs.	by only three executive governors handling a temporary priority constitution addendum, and
constantly disturbed uselessly by court cases fomented by useless self-interested politicians.	vs.	never disturbed uselessly by court cases fomented by inexistent babbling politicians.
All of it with the possible surprise, during a mandate, of new legislation or taxation not included in the last electoral program.	vs.	None of this action can include, during a mandate, the sudden surprise of new legislation or taxation not voted for in the contract of the last election.
All of it with the most expensive useless type of bureaucracy causing constant harassing conflicts with many citizens.	vs.	All of it with the cheapest possible structure of governance, a TetractArium, causing least possible conflicts with citizens.
All of it during uselessly long mandates of many years with various political new coalitions.	vs.	All of it in a short mandate of maximum 3 years and no possible formation of political coalitions.
All of it with an electoral system never tuned to fully avoid voting fraud (in fact, invented to ensure the use of voting fraud).	vs.	All of it with the most perfect fraud less biometric voting system ever created called BAVAD (the subject of this Reform 9).

With current technology, having such a perfect fraud-less voting system is much easier than having the capacity to go to the Moon or to Mars. If a perfect voting system has not been invented so far, it is only because it is not in the interests of corrupted politicians who, without a perfect system, can easily falsify the voting system in various fraudulent ways and manipulate voting results to their anticipated advantage. DatakAristarchy uses a perfect voting system that is biometric but nevertheless fully anonymous. As we will see, this is not a contradiction. The new voting system is also absolutely fraud-less. As we will also see, this is not an impossibility. Again, that voting system is called BAVAD (Biometric Anonymous Voting Admission Database). Its main functional items are mentioned here below in the following section.

As an in-depth **Princeton University** study confirms, democracy in most countries has been replaced by oligarchy, a system of government in which elected officials represent the interests of the rich and powerful rather than the average citizen. With BAVAD, and the obligation to vote to maintain citizenship, while voting with "***All-Truth-All-Knowledge***" for a fully binding contract instead of for a program, this terrible anomaly is fully corrected in DatakAristarchy.

Perfect Fraud-less Bio-Anonymous BAVAD Voting System

The new complex electoral system of DatakAristarchy based on a TetractArium instead of a parliament is explained in details only in the full book in terms of when and how an election can be called, what are the steps to complete it, and how the new elected structure of governance is formed without a parliament after the election. What follows is only a synthesis, as only an explanation of how voters fulfill their legal duty on a voting day by using the new perfect fraud-less biometric anonymous voting system called BAVAD.

To be clear, DatakAristarchy has a brand-new type of voting system that is as perfect as it can ever be, and with no possible fraud without committing a most serious crime, or even treason called DATAKOT (***Decentralized All-Truth-All-Knowledge*** Omission Treason). But for voters, the system is also as easy as it can ever be. Consequently, voting is not just an easy constitutional right any more, but becomes a compulsory legal duty in order to maintain citizenship, or to maintain residence for the non-citizen allowed and required to vote even if incapable of deciding the result of an election. Again, the system is called the BAVAD (Bio-Anonymous Voting Admission Database). Its separate new ATM-like machines for voting easily in various places are called BAVAM (Biometric Anonymous Voting Admission Machine).

Again, in DatakAristarchy, only citizens can and must vote to decide an election, but non-citizen legal residents must also vote even if they cannot influence the final result of an election. Both have two essential and obligatory types of identity cards in the format of credit cards. The first type of ID card is a regular normal ID like we have them today in most countries, with all its full identification details, including a photo, called a FEPNID (Fully Explicit Picture National Identity Document). This FEPNID, for citizens is green. The FEPNID for non-citizen legal residents is yellow. The second type of identity card, a card that both citizens and legal residents also have, is of a new type that does not exist today. It is a biometric card, but an anonymous card for only voting purposes. It is called the BAVID (Biometric Anonymous Voter Individuality Document). Its color is red. On it, there is a unique equally anonymous voting barcode called the BAVUB (Biometric Anonymous Voter Unique Barcode).

While voting, during a voting day, all voters use their bio-anonymous BAVID. Just after voting, they use this time their regular FEPNID to receive from an attending voting official an important written certification that they have voted, called a BEVER (Bio-Explicit Voted Election Receipt). Not having and maintaining such BEVER certifications by not voting for 3 times in a row without proper justification can mean the loss of citizenship for a citizen, and the loss of legal residence for an officially resident non-citizen, and for both, a loss of all sorts of related benefits, including those regarding the level of an eventual national public pension. All eligible voters must vote, but can vote most easily, electronically, and get a BEVER, doing so in all commercial centers, in many public buildings, in schools, in hospitals, and even at national consulates abroad.

All voters vote for a BEC (Binding Electoral Contract) associated to a candidate Governor (a kind of an elected executive president) responsible for its full execution in maximum 3 years. Only the citizen votes will decide the election. The non-citizen resident votes will only be for information useful to governance as to who lived in the country. All persons with a BAVID card vote for a BEC

more than for its associated candidate Governor, and for accepting the content of the Annex. They vote for their preferred BEC with a choice of up to maximum 10 BEC competing in each election. Only the 10 political parties with the biggest membership can compete with a BEC in an election. In any chosen BEC, there must be up to 10 items, maximum 10. The voter can reject one item of that chosen BEC (except if there is only one), but only one item. The other parties with a lower membership cannot participate in an election with a candidate governor or a BEC.

Again, the winning BEC contract is fully binding, and it must all be fully executed in maximum the coming 3 years. Otherwise, the relevant party that presented the contract cannot participate in the next election, not even with a new BEC, only eventually in the second next election, but the governor candidate himself who failed a first time cannot ever again be such candidate for any party in any future election because, with his unexecuted BEC, his career as a government official has legally ended for the rest of his life, and for any other kind of public position.

Essential elements of the perfect BAVAD voting system

How can the BAVAD (Biometric Anonymous Voting Admission Database) system for voting be a biometric system, and be also anonymous at the same time? The answer is easy. When the voting BAVID card is created, the voter has to first prove that he is a national citizen or an official legal resident. If so, as the first step, a biometric feature of the person is scanned. In principle, it is only the right-hand index finger, for its finger prints, or, in the absence of it, the next finger in a row, or another body feature for people without hands. This scanned biometric feature is then placed on a new BAVID card in an anonymous way.

The BAVID is also loaded with a lot of other characteristics of the voter that are all also anonymous. It creation includes the following information characteristics of the voter, as verified by the attending official creating the BAVID: the chosen biometric feature, the current city of residence, the current province of residence, the marital status, the number of non-voting minor children at home (except if accounted by the BAVID of the spouse), the birth sex, the year (only) of birth, the country of birth, another main nationality if any, the choice of a main national official language, the main family home language, the skin color (of only 4: black, white, yellow and brown), the main employment (including unemployed, self-employed or home manager), and the religion (or the fact that he is an atheist).

In addition, the BAVID anonymous process also creates a unique anonymous barcode called BAVUB (Biometric Anonymous Voter Unique Barcode) and also places it, openly this time, on the BAVID card as a proof that the anonymous holder is holding a voting card and is allowed to try to vote. But no other information system in the country can trace the real identity of the voter through this BAVUB or the BAVID itself. **All the BAVID information is without a name. It is fully and safely anonymous**. The BAVID data is all fed in the anonymous BAVAD system in order of the anonymous BAVUB barcode number, but without the BAVID card or the BAVAD system ever being able to find out who the person is, and without any other national informational system being ever able to find out who the holder is. When using it for voting, the BAVAM voting machine works entirely separately from the BAVID creation system. This is it, as a biometric anonymous voting tool!

When showing up for voting, the person will put his BAVID in a simple scanner not working with the Internet,(except when being updated) and have at the same time his chosen biometric feature scanned again, typically normally his right-hand index finger. If the biometric feature matches what is on the BAVID, there is a match, and the person is automatically admitted to start the fast and easy voting process by using the separate BAVAM voting machine. Again, **the**

BAVAD voting system or its separate BAVAM voting machine do not know, and cannot know, who the voter is. They only know that the person with that biometric feature is allowed to vote.

As a second preliminary step, the BAVAD will also be consulted, by the attending official, on the basis of the anonymous BAVUB barcode number on the BAVID, to first confirm that the person's anonymous BAVUB is still active, which should still be the case if the unknown person has not omitted to vote in the last 3 elections or referenda without justification (explained below). If the barcode is no more active and has been cancelled, the BAVID will be confiscated and the person will not be able to vote without attempting to get first a brand new BAVID for the next election. The BAVAD will also, as a second check, confirm that that BAVID owner has not already voted in the current election.

The voter will then vote by putting his BAVID voting card in the separate BAVAM voting machine. The BAVAM will absorb all the details of the anonymous characteristics of the voter on the BAVID, like his age, his citizenship, his city of residence etc. These will be useful for output statistics. The anonymous person will vote by choosing a BEC, and possibly by also rejecting one of its 10 items if he so wishes. Once a BEC choice has been made by the voter, and only if one was actually made, the BAVAM voting machine will issue to the voter a machine-readable paper ballot card the size of a credit card. This first card received by the voter is a BAVAB (Biometric Anonymous Voted Election Ballot) without identification details. But this BAVAB has on it explicitly the name of the country where the vote takes place, the date of the election, the number of the chosen BEC, and the number of the rejected item of the BEC if one was rejected. In addition, it carries all the characteristic details it has absorbed from the BAVID of the anonymous voter (like age, sex, citizenship, residence etc.) all in a machine-readable way.

The voter can first check if the BAVAB is correct in terms of voting choices (chosen BEC and Item rejection is any). If they are correct, the voter must insert himself that BAVAB ballot into a voting slot of the BAVAM to actually vote. This container of the BAVAB ballots will issue the voter a second card, as a voting receipt. This second card receipt is a temporary card called a BAVET (Biometric Anonymous Voted Electoral Ticket). It is blank except for showing a consecutive voting number, the name of the country where the vote takes place, and the date of the election or referendum printed on it. This BAVET will only confirm to a voting official in the following step that a proper choice of a BEC was actually made in the BAVAM voting machine.

With this BAVET in hand, the voter will then go to the attending voting official, and give to that official his BAVET in exchange for having from that official an explicit BEVER (Biometric Explicit Voted Election Receipt) for the current election on the basis of his normal FEPNID (Full Explicit Picture National Identity Document). This BEVER must be well safeguarded as it may be needed in the future in order to possibly have to use it eventually to prove the voter has voted, and consequently can maintain his citizenship or residence if necessary. That BEVER certification is issued in his full name for that election on the basis of the normal FEPNID identity card of the voter. It includes the name of the country, the date of the election or referendum, and all the regular FEPNID details of his normal national public identity card. The BEVER database will serve to possibly help establish who has not voted in the last 3 consecutive elections or referenda.

The BAVUB (Biometric Anonymous Voter Unique Barcode) on the BAVID is mainly useful if the BAVID is lost, or if the holder dies. In such cases, the BAVID will be cancelled from the BAVAD on the basis of the BAVUB on the recuperated BAVID if and when brought to a voting official by whoever has it or found it. The number of the BAVUB in the BAVAD system also expresses the official number of citizen and resident voters in the country. The paper voting BAVET tickets

given to the voting official indicate only the total number of persons who have actually voted, not the number of potential BAVUB voters in the BAVAD database.

Only the machine-readable BAVAD (actual ballot) of citizens will indicate who has been chosen to finally win the election. It will also provide all sorts of useful statistics by party and by other categories like region, sex, language, age etc. related to both citizens and residents. In this way, each election also becomes like a nearly exact census of who lives legally in the country, and the main characteristics of these persons. The winner governor and his BEC in the anonymous election can be declared electronically very quickly after the closing time of the election on the basis of the machine readable BAVAD ballots already existing in it, or transmitted to a central place when transmitted physically from a distant consulate abroad. However, the BAVAD paper ballots will also be physically checked in the following days and, if there is a conflict with the electronic compilation, only the paper BAVAD votes will give the final confirmation of who the real winner is.

Apart from national elections, citizens can be called to vote quickly and easily in many public places on a referendum for various purposes at any time. They legally must also vote in such cases with their BAVID, doing so easily at their most convenient place. For a referendum, the electronic result of the BAVAM will usually suffice, and the BAVAM cards will not normally be counted unless there is a suspicious reason to want to do so. But a BAVET slip is issued to each voter with the referendum number and the BAVUB barcode number of the BAVID of the voter for eventual necessary controls regarding conservation of citizenship or legal residence.

In other words, **voting has become a very important compulsory legal duty, but a most easy one and a perfectly anonymous and fraud-less one**. **Each election also becomes a kind of regular updated census of the population** living legally in the country, which is most useful to governance.

All aspects of the BAVAD system, in hardware or software, must be all of exclusive national production by national citizens, and never come from abroad or with the assistance of foreigners, as this would be considered treason.

Any type of corruption in the electoral process, or any type of fraudulent programming or manipulation of the BAVAD system in hardware or software, or in any other aspect of the electoral process, is not only at least a serious crime, but possibly even treason. It will be punished by at least the most serious level of PPPP (Personal Property Priority Punishment), and possibly by even up to the death penalty (s. Reform 30) if the fraud or manipulation has caused serious massive damage, not to one or to only a few persons, but serious damage to the citizenry of the whole country by leading to false national leadership and an undesired and fake BEC electoral program for the following 3 years.

Punishing national election fraud through up to death penalty

In DatakAristarchy, ***All-Truth***, and consequently full transparency, is so fundamental and important that anyone doing intentionally something to prevent the BAVAD voting system to work perfectly as it should, with perfect fraud-less results, without the possible falsification of thousands of votes, be it through software or hardware, or in operational activity, commits clearly at least a most serious crime or treason called DATAKOT. Even a minor infraction is punished most severely through PPPP (Personal Property Priority Punishment). A major infraction falsifying the results of the election to the point of electing a governor who is not the real legitimate winner is punished through up to the death penalty (s. Reform 30) that still exists for this kind of treason causing major massive damage to all citizens of the country.

Easy BAVAD referenda become the main tool to control governance

In DatakAristarchy, a BAVAD referendum prepared with full DATAK enlightenment becomes the most absolute tool of control of governance. If won, it supersedes any law, even the constitution that may have to be adjusted accordingly after it. It can be called by the concurrence of the 3 following heads of the TetractArium of governance: the GovernAriant, the DatakAriant and the SPELLAriant. It can be called by 3 cities if their 3 mayors concur. It can even be called by the people if enough popular uprisings in its favor in public places seem to justify it according to the LeaderAriant. BAVAD cubicles are available in each commercial center and school to ensure easy, fast and fraud-less voting to control governance and maintain citizenship or legal residence.

Voting a fully binding contract instead of a plain electoral program

Again, it must be stressed that DatakAristarchy has elections not based on an electoral program, but on a BEC (Binding Electoral Contract), as a contract that is strictly binding in 4 different ways. That contract is the action plan of a newly elected government for 3 years. Any planned new law (and related tax) must be already included in the BEC as a ClawPro, and there cannot be any surprise after an election, during a mandate, in terms of a new law or new tax.

Voting may be done in up to 3 rounds to ensure clear winner

In DatakAristarchy, voting is not only fraud-less, but changed in nature. Citizens do not vote directly for a political party, but for a fully binding contract. In addition, they do not vote for representative parliamentarians in a huge parliament. The parliament of representatives is eliminated (s. Reform 10) as it was necessary only before the cumulative inventions of the telephone, the airplane, the television and the Internet. What runs the country is a new slim structure of governance called a TetractArium (fully explained in the full book) based on ***All-Truth*** and absolute full liberty of opinion, not a useless elephantic and overly costly parliament.

Of course, the voted binding contract comes from a political party, but it is not the party that wins the election. It is the binding contract offered by that party. Consequently, no political coalition can take place to form a majority government. The binding contract won at full majority and full enlightenment will guide the new government in an absolute way as a kind of temporary priority addendum to the constitution. Consequently, nobody and no institution, not even a constitutional court, can prevent its full realization during the coming mandate. Up to 3 rounds of voting will take place if necessary to decide which binding contract is the final winning one.

Again, in DatakAristarchy, people (citizens who will decide an election, and legal resident who cannot decide an election but provide useful information to governance) not only have a right to vote, but also a legal duty to vote in order to maintain their citizenship or legal residence. Not voting for 3 times without justification means losing citizenship and all its attached privileges. To help this legal duty, voting is not only made very easy, but also entirely anonymous and fraud-less through the above new BAVAD voting system.

In a national election, only the ten political parties with the most membership can participate in the coming election with their binding contract. If one party gets 51% of the votes in a first round, this is the end of the election, and that party runs the country on the basis of its BEC (Binding Electoral Contract). As long as its associated governor executes this fully binding contract, it does what the majority of fully enlightened DATAK citizens have chosen as a fully binding contract, and he cannot be disturbed by any parliamentarian political babbling or by the intervention of a politicized judge like it is too often the case now in most countries.

If the first voting round is too uncertain, the 3 most voted parties of this first round mat go for a second round after 2 weeks. If one of the three still does not get 51% of the votes in that second tour, a third tour takes places after 2 more weeks between the two most voted parties of the second tour. The winner of the 2 parties of that 3rd tour that necessarily got more than 51% of the votes finally runs the country on the basis of its BEC (Binding Electoral Contract). No type of coalition is possible or necessary to do so effectively during the next 3 years mandate.

Between the possible 3 tours, a BEC can be changed but only and exclusively to adjust one, and only one, of its 10 items, to an exact item of the content of the BEC of one of the previously voted parties (adding an item of the other party, or replacing one of its own items with one of the other party). Any fraud in this electoral process becomes a crime punishable most severely through at least PPPP (Personal Property Priority Punishment), and possibly treason punished by up to the death sentence (s. Reform 30) of the main person who is responsible for a fraud that has caused a false winner in the national election, thus massive damage to the whole citizenry.

A voter can vote for only one BEC (Binding Electoral Contract), as the one he prefers of the up to 10 parties with most membership. In turn, a BEC can contain only up to 10 items. Of the BEC he votes, a voter can reject one, but only one specific item. When the winner of the election is established, if one of the items of his BEC has been rejected by 51% of the voters voting his BEC, that item becomes excluded from the final BEC being used by the winner for his mandate. Any new law and its necessary taxation have already been included in the winning contract as ClawPro, and there can be no surprise in terms of new legislation or new taxation during the mandate.

Along with routine operation, all special situations or emergency events that could not have been planned for in the winning contract can be easily handled through the OBECOF (Out Binding Electoral Contract Operational Fund) system, or by a quick and easy referendum if and when necessary. Such referendum is made as quick and easy as the regular voting was, through the use of the same BAVAD system. If the referendum is lost, a full new BAVAD election will take place immediately.

New Political Parties More Specifically

In DatakAristarchy, political parties have a brand new and vital role very much related to essentially the development of a BEC and the choice of a GovernAriant candidate to fulfill that BEC in a forthcoming election. The drafting of that BEC (Binding Electoral Contract) is rather complex. It has an Annex that includes a precise framework of all the contemplated new laws. It also includes the list of the eventual CabinetArium 8 members for the winning GovernAriant.

All political parties must defend the DatakAristarchy and the culture of its 30 cumulative reforms, even if through a variety of different electoral contracts. Doing otherwise would mean operating in an unconstitutional way, which would be not only illegal, but unconstitutional, in other words impossible legally. The main role of the new political parties is to guide and illuminate their membership, but in line with the desires of their membership, into the elaboration of a BEC (four-way-Binding-Electoral-Contract). That BEC of the GovernAriant winning the election will become the only roadmap of the country for the time of that electoral mandate, with its respect being under the supervision of all the other Ariants of the TetractArium, but mainly the DatakArium and the SPELLArium with its ESSAD Power.

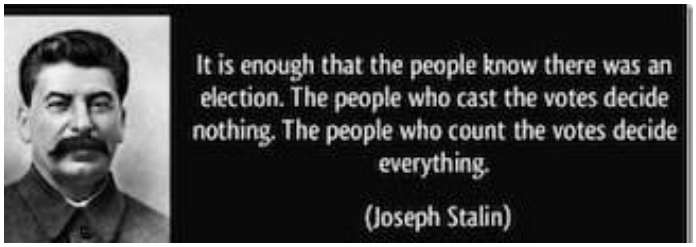

In DatakAristarchy a PPC (Political Party Contender) cannot receive any public financing whatsoever. It can count only on the money of the yearly registration fees of its members (s. Reform 4). However, the state will assist parties in the following way: it will give free office space

for the 10 parties with the biggest memberships, within the premises of the OppositArium plus one single room for all the other minor parties together. The 10 parties with the highest membership are called PPC (Political Party Contender). Only these 10 PPC will be allowed to participate in a new national election. The ranking of all registered political parties for their admission to the PPC group is reviewed yearly on the basis of their respective membership.

Registration fees for membership to a political party are allowed only from physical persons who are nationals of the country. Official residents who are not citizens can offer an annual fee, but only through a proxy citizen. Foreign businesses with quarters in the country can do the same (pay the yearly fee of a person, no more) through a proxy citizen if they do not have a citizen manager to do it for them. Otherwise, no non-person, and no non-national entity or person, is allowed to give directly any other kind of financing to a political party without committing a crime. DatakAristarchy political parties live out of only membership fees, and have to fight and compete to increase their membership without the help of any kind of BigMoney entity.

Membership is vitally important because it reflects the power of the SPELLArium and the power of the BEC that will become the BECOMVBAC absolute roadmap of political action during a winning electoral mandate. Membership names are all published openly by the TinformArium and one national person can only be member of one single political party at any given time.

On the basis of the level of their memberships, the list of the 10 PPC political parties accommodated free of charge within the OppositArium will change in time when the ones with decreasing membership will have to move out and, except for a basic common room with other minor parties, will have to find and pay their own accommodation outside the OppositArium to make room for the 10 PPC parties with the highest memberships.

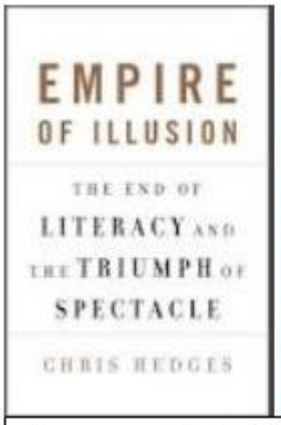

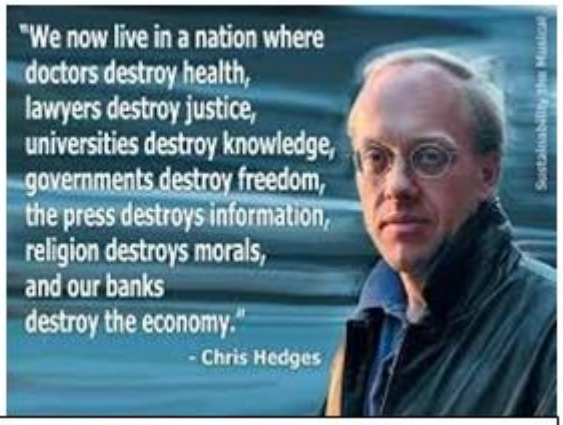

A candidate GovernAriant cannot be considered an official candidate without having first formed or joined a political party, and cannot present himself in an election without first his party having already acquired a membership that places it into the list of the 10 PPC parties with the highest membership, let alone his party having already elaborated a BEC to be notarized and published at least 3 months before an election campaign. Again, a GovernAriant is always and only elected at full majority after full DATAK enlightenment with a BEC, and without the disturbance of a heavy and inefficient babbling parliament of ignorant and falsely prestigious representatives paid uselessly by the taxpayers.

Consequently, no political coalition is ever possible anymore, not before an election, and in particular not after an election during a mandate. It is never a coalition that runs the country, but the governor of the winning BEC (Binding Electoral Contract). Needless to say that a GovernAriant cannot change political party and program (or rather his fully binding BEC contract) without resigning and calling a new election with a new BEC.

The BAVID card to see all public money like a personal bank account

The bio-anonymous BAVID card will **allow all citizens to see all movements of public money as if it were their own bank accounts** by using a combination of the card and the bio-feature the citizens had placed on the card, which is typically a finger print (s. Reform 5).

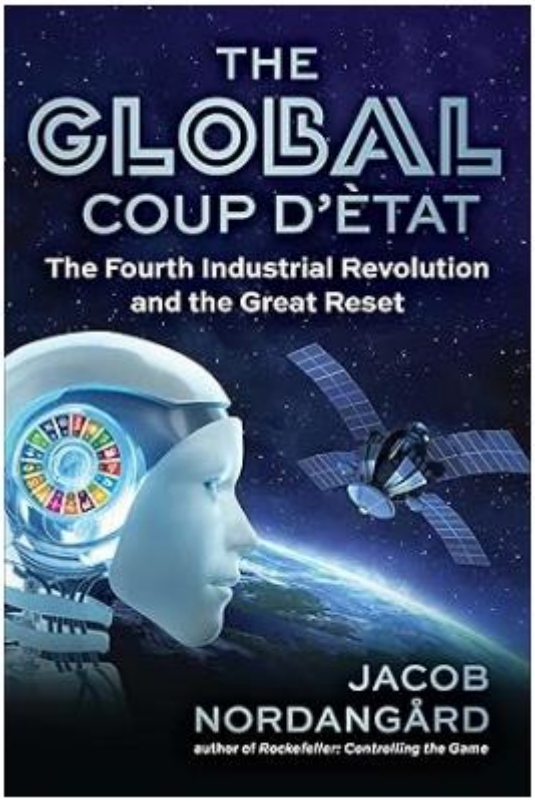

As per **Chris Hedges**' book, we now live in an "**Empire Of Illusion**" that is destructive of all aspects of our life. What he did not dare say explicitly is that this evil empire is run by what we call the **GLEC** (Global Luciferian Enslaving Clique) of the so-called infamous *New World Order* that we call **GLEWO** (Global Luciferian Enslaving World Order).

The worst illusion

The worst of this empire of illusions has to do with fake elections and politicians who pretend to be our leaders and saviors when they are the puppets of an evil cabal using them on a global basis in order to achieve a dictatorial **One-World-Government** of full enslavement of all of us and all our nations.

This is the conspiracy of the cabal we best call the evil FastCABAL (Fake Abrahamic Satanic Technocratic CABAL) enslaving the rest of us.

Global Coup d'État

The year **2001** and the 911 false flag coup of the twin towers in NYC was the necessary prerequisite test for the cabal to see if it could implement easily a variety of harsh new legislation restricting globally our liberty. That test was fully successful. The year **2020** will go down in history as the year when the global coup d'état was finally fully initiated, hidden in plain sight, in the context of the other false flag coup of the fake COVID-19 crisis.

The powers behind these false flags emerged clearly, offering a totalitarian solution which the WEF calls **The Great Reset**, meaning that mankind must be fully merged with a global system of Technocracy deceitfully put in place for our own safety, security, and well-being.
